About Our Products

Extraordinary characteristics of our paving

The strongest in the world, compressive strength S class. Snow, ice, salt and sunlight cant harm this paving nor change it's appearance or structure. Large trucks and heavy vehicles can be driven over this well designed paving and it will endure all weather conditions.

Abrasion - 0.06%

The paving weathers as well as the finest stone even after many years it will look as good as the day it was laid.

Colour Stability

We use the highest quality pigments for the manufacturing of the paving blocks and because the colour forms part of the mixture, it does not fade or leak out.

Totally Smooth Yet Non-Slippery

Thanks to the special additives to the concrete and the excellent technology used in the manufacturing process, our paving is perfectly smooth - very unusual for this type of material, and at the same time totally non-slip and safe.

Ultraviolet Materials

Extraordinary resistance to the South African sun and conditions, as well as chemical spills and oils.

Natural Materials

All the bricks are produced from high quality natural materials in keeping with the ecological demands of the 21st century.

Uses

For all surfaces which require paving from streets, pedestrian paths,warehouse surroundings, swimming pools, stadiums, petrol stations,garages, and many more.

Quality

Of the highest standards, proven by SABS certificate and various test on chemical and physical resistance.

SABS Approved Product
